

# La Cumbre Mutual Water Company 695 Via Tranquila Santa Barbara 967-2376

## 2022 CONSUMER CONFIDENCE REPORT DATA

SOURCE

Este informe contiene información muy importante sobre su agua beber. Tradúzcalo ó hable con alguien que lo entienda bien.

Please see last page for key to abbreviations

	I	State	PHG	Range	SOU GROUND	RCE   SURFACE	
Parameter	Units	MCL	(MCLG)	Average	WATER	WATER	Major Sources in Drinking Water
PRIMARY STAND	ARDSN	Mandatory He	alth-Related S	tandards			
CLARITY (a) Combined Filter	NTU	TT=1 NTU	Hi	ghest Single	1	T	Soil runoff
Effluent Turbidity			N	leasurement	NA	0.05	
MICROPIOLOGICAL (L)		TT=95% of samp	les <0.3 NTU		NA	100% Sample	s <= 0.3 NTU
MICROBIOLOGICAL (b) Total Coliform	1	5% of			1	1	
Bacteria	Samples		(0)	Reporting			Naturally present in the environment
(Distribution System) Fecal Coliform and		samples (b)		Value Range	0 Positives 0 Positives	1 Positives 0 Positives	
E. coli	Samples	(b)	(0)	Average	0 Positives	0 Positives	Human and animal fecal waste
(Distribution System)				Highest	0 Positives	0 Positives	
Disinfectant Byproduct Total Trihalomethanes	s - Disinfe I	ctant Residuals -	Disinfection Byp	Range	ursors 15.9 - 34.9	0.4 - 59	By-product of drinking water
(Distribution System)( c)	ppb	80	NA	Average	25.7	49	disinfection
Haloacetic Acids (c) (Distribution System)	ppb	60	NA	Range Average	5.8 - 10.6 7.85	ND - 21 22	By-product of drinking water disinfection
Disinfectant - Free	рры	MRDL as Cl2	MRDLG as Cl2	Range	0.2 - 3.4 (d)	ND - 2.2	Measurement of the disinfectant
Chlorine Residual Control of DBP pre-	ppm	4.0	4.0	Average Range	0.9 (d) 0.36 - 0.96 (d)	0.73 2.1 - 3.8	used in the production of drinking water TOC has no health effects. However, it provides
cursors - TOC	ppm	TT	NA	Average	0.63 (d)	2.7	a medium for the formation of disinfection by-
INORGANIC CHEMICA	10						products. Various natural and manmade sources
INORGANIC CHEMICA				Range	ND - 120	ND - 180	Residue from water treatment process;
Aluminum	ppb	1000	600	Average	24	56	Erosion of natural deposits
Arsenic	ppb	10	0.004	Range Average	ND NA	ND NA	Erosion of natural deposits
				Range	ND	ND	Erosion of natural deposits
Barium	ppm	1	2	Average Range	NA 0.38 - 0.63	NA 0.39 - 0.51	Erosion of natural deposits;
Fluoride	ppm	2	1	Average	0.47	0.46	water additive for tooth health
Nitrate (as NO3)	ppm	45	45	Range Average	ND - 7.3 1.78	0.44 - 10.5 3.80	Runoff & leaching from fertilizer use; sewage; natural erosion
Hexavalent chromium,				Range	ND	ND	Discharge from electroplating factories, leather
Cr VI	ppb	10	0.02	Average	NA	NA	tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing
							facilities; erosion of natural deposits
			N				
LEAD & COPPER RULE	:S - Moni	tored at the custo	mers tap. Numb	Value	ceeded Action	Level = 0	Internal corrosion of household plumbing
Copper	ppm	1.3	0.3	90th %	0.80	NA	systems; erosion of natural deposits;
				Value		<u> </u>	leaching from wood preservatives.  Internal corrosion of household plumbing
Lead	ppb	15	0.2	90th %	ND	NA	systems; discharges from industrial
							manufactures; erosion of natural deposits.
RADIOCHEMISTRY - Ra	adioactive	Contaminants					
Gross Alpha				Range	ND - 5.1	ND	Erosion of natural deposits
	pCi/L	15	MCLG, 0	Average	3.0	NA	
Radium 228	0:4	N1/A	N1/A	Range	0 - 0.283	ND	Erosion of natural deposits
	pCi/L	N/A	N/A	Average	0.0566	NA	
SECONDARY STA	NDARD	SAesthetic	Standards				
Chloride		500	NA	Range Average	26 - 130 78.4	30 - 36 33	Runoff/leaching from natural deposits; seawater influence
Chioride	ppm	500	INA	Range	3 - 5	ND	seawater influence
Color (ACU)	Units	15	NA	Average	4	NA	Naturally occurring organic materials
Copper	ppb	1000	NA	Range Average	ND NA	ND NA	Corrosion of plumbing systems; erosion of natural deposits; leaching from wood preservatives
Соррог	pps	1000	14/	Range	ND - 26	ND	
Iron	ppb	300	NA	Average			Leaching from natural deposits;
Manganese					1 ND - 200	NA	industrial wastes
	ppb	50	NA	Range Average	1 ND - 200 105.4		
Oder Threehold				Range Average Range	ND - 200 105.4 1 - 4	NA ND NA 1 - 4	industrial wastes
Odor Threshold Specific	ppb Units µmho/	50	NA NA	Range Average	ND - 200 105.4	NA ND NA	industrial wastes Leaching from natural deposits
	Units			Range Average Range Average Range Average Average	ND - 200 105.4 1 - 4 2.75 990 - 1700 1338	NA ND NA 1 - 4 3 883 - 1016 952	industrial wastes Leaching from natural deposits  Naturally occurring organic materials  Substances that form ions when in water; seawater influence.
Specific Conductance	Units µmho/ cm	3 1600	NA NA	Range Average Range Average Range	ND - 200 105.4 1 - 4 2.75 990 - 1700	NA ND NA 1 - 4 3 883 - 1016	industrial wastes Leaching from natural deposits  Naturally occurring organic materials  Substances that form ions when in water; seawater influence. Report Date: June 2023

In 2022, 54% of our water was from our wells, the remaining 46% was State Project Water after flowing into Lake Cachuma and being treated by the Santa Barbara City Cater Surface Water Treatment Plant. Therefore, the surface water quality portion of this report comes from the city of Santa Barbara. Sections of our service area along State Street and Modoc Road receive water that was treated entirely by the city of Santa Barbara.

Time and place of regularly scheduled board meetings for public participation: Once a month at 695 Via Tranguila, please call for exact date and times 805 967-2376.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

- Contaminants that may be present in source water include:

  Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
  Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

  Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.

  Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.

  Radioactive contaminants, which can be paturally-occurring or he the result of oil and gas production and mining activities.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, USEPA and the State Water Resources Control Board (SWRCB) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. SWRCB regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

This report lists all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The SWRCB requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, are more than one year old.

Additional General Information On Drinking Water:
All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at 1-800-426-4791 or www.epa.gov/safewater/.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice from their health care providers about drinking water. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791 or www.epa.gov/safewater/.

#### ABBREVIATIONS AND NOTES

Type of water sources in use: Five ground water wells and State Project surface water from Lake Cachuma through Santa Barbara City Cater Treatment Plant.

Name of Sources: Well #16, Well #17, Well #18, Well #19 & Well #21 and seven metered connections to Santa Barbara City Water. Note: Depending on where you live, our water is a mixture of groundwater and surface water.

Water Quality Report: Listed are substances detected in the drinking water. Not listed are more than 135 regulated and unregulated substances that were below

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. La Cumbre Water Co. is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

#### Definitions:

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the Environmental Protection Agency.

Maximum Contaminate Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency

Maximum Contaminate Level (MCLs): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant (chlorine) added for water treatment below which there is no known or expected risk to health. MRDLGs are set by the U. S. Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant

(chlorine) added for water treatment that may not be exceeded at the

consumer's tap.

DBP: Disinfection Byproducts

### Footnotes:

- Turbidity (NTU) is a measure of the cloudiness of the water and it is a good indicator of the effectiveness of our filtration system. Monthly turbidity values for ground water are listed in the Secondary Standards section.
- (b) Total coliform MCLs: The State MCL for coliforms is no more than 1 per month for water systems which collect less than 40 samples per month (La Cumbre Water). Systems which collect over 40 routine samples may not have more than 5% positive per month.
- (c) Compliance based on the quarterly annual average distribution (d) Although reported under ground water these readings were taken from
- the distribution system and are a combination of ground and surface water.

Regulatory Action Level (AL): The concentration of a contaminant which if exceeded, triggers a treatment or other requirement which a water system must follow.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for

contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCL's for contaminants that

effect taste, odor or appearance of drinking water. Contaminants with SWDS do not affect the health at MCL levels.

Unregulated Contaminant Monitoring Regulations (UCMR): Data generated by the new UCMR will be used to evaluate and prioritize contaminants on the Drinking Water Contaminant Candidate List, a list of contaminants EPA is considering for possible new drinking water standards. Also known as "St Regulated Contaminants with No MCLs".

NA: Not Applicable ND: Not Detected

### Abbreviations

"<" = Less Than AL = Regulatory Action Level

ACU = Apparent Color Units

MCL = Maximum Contaminant Level

MCLG = Maximum Contaminant Level Goal MRDL = Maximum Residual Disinfectant Level MRDLG = Maximum Residual Disinfectant Goal

NA = not applicable
NC = Not Collected
ND = None Detected
NTU = Nephelometric Turbidity Units

pCi/L = PicoCuries per liter

PHG = Public Health Goal

ppb = parts per billion, or micrograms per liter (μg/L) ppm = parts per million, or milligrams per liter (mg/L) TOC = Total Organic Carbon

TT = Treatment Technique

µmho/cm = micromhos per centimeter

(unit of specific conductance of water)
